STRETCH CEILINGS

2d EDITION

ART COLLECTION

The first edition of this catalogue was published in 2006. Over the past 6 years our collection of images has significantly increased.

There are 7 themes to the main ART Collection catalogue. Hard work was carried out on image selection, new printing methods and new equipment.

For the moment we use 2 main printing technologies – eco-solvent printing and UV printing.

For eco-solvent printing: max width without welding is 320 cm, printing on white materials, the surface of the material is not changed after printing, it means that the lacquered sheets will have a glossy surface also after printing.

The features of UV printing: it could be done on any surface up to 250 cm width and 6 cm thick max. The printing quality is high. Images look more textured and light-tight. This kind of printing is popular for the ceiling void lighting and stained-glass artwork ceilings. The image printed by UV technology is always matt finish and this effect can look good on lacquered finishes.

The images from this collection can be used in any interior design not only for the stretch ceilings. We can print on different surfaces with different colours. We pay careful attention to reliability of our products; we use only environmental materials for printing.

**Our production methods are safe, clean and sustainable.**

#### CONTENT:

Introduction.....	2
Sky, clouds.....	6
Space.....	10
Leaves.....	14
Geographical maps.....	26
Ancient maps.....	28
